

Have you mastered finding equivalent fractions?

- a) These pairs of fractions are equivalent fractions. True or false? In each case, explain your answer.

• $\frac{2}{3} = \frac{5}{6}$

• $\frac{1}{4} = \frac{3}{12}$

• $\frac{3}{8} = \frac{6}{16}$

• $\frac{3}{5} = \frac{15}{20}$

- a) Write each of these fractions in its simplest form.

$\frac{16}{20}$

$\frac{18}{24}$

$\frac{20}{30}$

Champions' Challenge

1. In each case, identify the odd one out and explain why.

• $\frac{12}{16}$ $\frac{3}{4}$ $\frac{20}{28}$ $\frac{15}{20}$

• $\frac{9}{15}$ $\frac{15}{25}$ $\frac{35}{50}$ $\frac{3}{5}$

• $\frac{15}{18}$ $\frac{10}{15}$ $\frac{22}{33}$ $\frac{6}{9}$

2. Make up another problem like this for your friends to solve.
